What we do

Our remit is worldwide and our global portfolio seeks to address an ever-shifting landscape. We own hedge funds as well as traditional equity funds and credit funds. Primarily we back active managers but also select passive funds. We actively monitor and if needed adjust weightings to adapt to the market environment. We believe that this structure works better than a buy and hold approach in volatile markets.

A change in the zeitgeist is here, and investors need to be better equipped to survive some spectacular market shifts from global and political change.

The NAV on 28th February was 169.27p

A bit of history - read more about the VT GTRF – click here www.icfmanagement.co.uk

The Global Total Return Strategy is available separately as a segregated mandate.

The strategy is a multi-asset portfolio and may be considered appropriate for investors with a long term investment horizon who are looking for a consistent return with lower volatility than equity markets generally – typically less than 2/3 of the S&P500.

VT Global Total Return Fund

As at 28th February 2026

The Fund's return for February was +2.69% closing the month at 169.27p per share. The NAV return for the ytd is +5.19% and +12.45% for the past 12 months.

February saw global equities continue to edge higher with Europe and Asia outperforming a softer US, while oil firmed and the dollar strengthened. At the same time, credit markets were steady, with investment-grade outpacing high yield as spreads widened modestly. Sticky inflation signals tempered near-term rate-cut hopes, adding to tariff and significant geopolitical tensions later in the month.

Against this background we reduced global equity exposure by trimming UK, EM and US positions and reducing our dedicated technology holding, while adding to our credit exposure through a new position in a U.S. investment grade fund. At the same time we decided to increase our cash position to 13%.

Since month end the US & Israel military strikes against Iran have caused sharp pullbacks across markets and we would expect to benefit from having tilted the Fund more defensively with lower equity exposure, higher credit quality and elevated liquidity.

Investment and Risk Profile: By investing in funds which invest within Global Total return fund types, you are likely to be looking for an investment which aims to return a positive return, with capital preservation and lower volatility than equity markets generally. You are willing to accept however, that your investments will fall and rise and you could get back less than you invested – also that when equity markets do well, this Fund may not deliver the same high returns in the short term.

The green shaded area in the table above shows the fund's current ranking and is based on past data and may not be a reliable indication of the future risk profile of the Fund. **Risk Warnings and other important information.** Issued by icf management limited, registered in England & Wales no 5575763.
